SUMMARY

AI enablement builder who turns manual work into tools other people run themselves. Now an AI Enablement Specialist in Axos Bank's Consumer Division. Before that, migrated and audited 50,000+ regulated records at a pharma CDMO and built a suite that cut a multi-day document review to a 3-minute run, and co-founded a software company that shipped across 2,461 commits with 107 tests gating every deploy.

EXPERIENCE

AI Enablement Specialist | Axos Bank, Consumer Division, San Diego, CA — Nov 2026 to Present

- Build and maintain AI-powered tools, and the platforms behind them, for business teams across Consumer Banking.
- Run intake and coordination for AI initiatives submitted by business partners, and prepare progress reporting for leadership.
- Apply governance, risk, and compliance standards so AI initiatives scale safely inside a regulated bank.

QA Data Migration Specialist | PCI Pharma Services (CDMO), San Diego, CA — Mar 2026 to Sep 2026

- Partnered with Quality, IT, and Compliance to migrate and audit 50,000+ regulated records with full metadata traceability in a GxP environment.
- Took an internal automation idea from prototype to daily production use: a 58-function PowerShell suite (~2,000 lines) reconciling 20,000+ controlled documents across nine document classes, cutting a multi-day manual review to about 3 minutes.
- Built a two-source verification layer that proves every result against independent queries; it caught a silent parsing defect mislabeling document revisions across the archive.
- Put a GUI and exception-only reports over the tool so the business team runs its own morning check, and designed a move-never-delete file architecture with a CSV audit trail for every action.

AI Solutions Engineer & Product Manager (Co-Founder) | Joint Theatrical Ventures LLC, Remote — Sep 2025 to Sep 2026

- Owned delivery end to end with a two-person core team: roadmap, backlog, contractor hiring, scope, budget, and release.
- Shipped the product across 2,461 commits: React front end, Node.js serverless API on AWS (Lambda, API Gateway, DynamoDB, S3), with 107 tests gating every deploy.
- Built a multi-agent Discord orchestrator in Python whose agents own deployment, infrastructure diagnostics, CI failure triage, and status reporting, with DynamoDB state and audit logging.

Event Coordinator & Finance Intern | Tritonthenix (UCSD). Ran budget and outreach; grew event attendance 40% in one year. — Jun 2023 to Jun 2025

PROJECTS

- **G.A.B.E. portfolio VI:** Claude-backed agent that answers recruiter questions from a single source of truth, served from a Cloudflare Worker with origin allowlisting, rate limiting, and an offline fallback.
- **sop-rag:** retrieval over a controlled-document corpus with a labeled eval set and enforced citations: 1.00 recall@4, 1.00 correct abstention, 0.00 false abstention. CI gates on eval regression.

SKILLS

AI & Automation: Claude API, LLM agents, prompt engineering, RAG and evals, Python, PowerShell, JavaScript / React, JSON, REST APIs

Governance & Delivery: AI governance, GxP / SOP compliance, audit traceability, intake and requirements, UAT and acceptance criteria, stakeholder reporting

Data & Cloud: SQL, Snowflake, data validation and reconciliation, AWS (Lambda, S3, DynamoDB, API Gateway), Cloudflare Workers, Git / GitHub Actions

EDUCATION & CERTIFICATIONS

B.S. Cognitive Science, Design & Interaction | University of California, San Diego. Minor in Computational Social Science. — Jun 2025

Google Project Management Professional Certificate; Agentic AI; Agent Memory; A2A: The Agent2Agent Protocol; Spec-Driven Development with Coding Agents; HarvardX CS50 Databases with SQL; Snowflake for Developers
